

## SeaCom - PGR

Organic Seaweed Concentrate (0-4-4)

Net 1 gallon

From the Cold Dark Waters of The North Atlantic... comes a seaweed, rich in micronutrients and plant growth hormones. Through careful processing, we are able to preserve those micronutrients and hormones. SeaCom - PGR is a true liquid seaweed extract that has been condensed to a level many times more concentrated than our regular seaweed extract.

**Guaranteed Analysis:**

Total Nitrogen	0 %
Avail. Phosphoric Acid ( $P_2O_5$ )	4 %
Soluble Potash ( $K_2O$ )	4 %

**Ingredients:** Seaweed Extract

**Caution:** Do not take internally. Keep out of the reach of children.

Your satisfaction is guaranteed.

**General Use Instructions:** For best results, SeaCom should be applied before noon or after 4:00 p.m. A spreader/sticker (surfactant) should be used with this product. SeaCom is diluted with water and applied as a soil soak or most effectively used as a foliar spray. Shake well before use. SeaCom may be used by itself, or can be mixed with other sprays (fertilizer, pesticides, herbicides.)

Unless otherwise noted below, SeaCom should be used at the rate of 1 pint per acre, mixed with enough water to provide thorough coverage of plant surfaces, or 1 tps. per gallon of water.

**General Growth:** Use 1 pint per acre, 3-4 times during the growing season. SeaCom should be applied at seeding/transplant, again at prebloom, after flowering or petal drop and 1-2 additional applications at 3-4 week intervals.

**Transplanting and Seed Bed Treatment:** Use 2 pints per acre or 1 part SeaCom to 1000 parts water (1-1/2 tps. per gal. of water) as a root dip and watering solution when transplanting. Use 2 pints per acre applied to the seed bed at time of seeding.

**Stress Relief:** Use 1 pint per acre anytime a crop is prematurely dying down (loss of color) due to weather, insect infestation, fungus attack and/or herbicide burn.
