

## BRUSSELS SPROUTS PLANTING/HARVESTING PROGRAM

Plant several varieties of Brussels sprouts with different days to maturity at the same time, and harvest in succession. The less cold-hardy varieties are faster-growing, and the more cold-hardy varieties are slower-growing. Each matures in its appropriate season from a spring planting. Growers in regions with long growing seasons can typically plant additional successions of Divino, the latest variety.

### Variety and Harvest Slot

Part #	Variety	Days to Maturity	Harvest Window
4539	Gladius (F1)	98	Early (September)
3633G <b>CG</b> or 3633	Dagan (F1)	100	Mid-Early (October)
4566G <b>CG</b> or 4566	Divino (F1)	110	Mid-Late (Nov-Dec)
