Product Species	Days to Germination	Sowing and Growing	Light Preference	Plant Spacing	Plant Height	Hardiness Zones	Harvest
Sunflowers, Single-Stem, Pollenless <i>Helianthus annuus</i>	7-14 days at 70-75°F (21-24°C)	Direct seed (recommended) - After last frost, sow 1/2" deep. Transplant - Sow into 72 to 50-cell flats 2-3 weeks prior to planting out. Plants dislike root disturbance, but sowing indoors and then transplanting the first crop outdoors can be a successful way to get first-early sunflowers. Do not pinch plants. Pinched single-stem sunflowers will produce low-quality blooms or no blooms at all. Succession-sow every 1-2 weeks and/or plant multiple varieties with varied days to maturity for continuous harvest.	Sun	4-6"	Varies	Annual	Fresh - Flowers are just beginning to open. Dried - Flowers are completely open. Hang or use silica gel.
