

ONE-CUT LETTUCES

Insights & Techniques for Small Farms

Copyright © 2023 Johnny's Selected Seeds. All rights reserved.

An aerial photograph of a large agricultural research farm. The scene features several long, covered walkways or tunnels, likely for growing plants. In the foreground, there are rows of crops and a dirt road with various farm vehicles, including tractors and a trailer. The background is filled with dense green trees and a small pond. A white text box with a thin black border is centered over the image, containing the text "Johnny's Research Farm".

Johnny's Research Farm

JOHNNY'S RESEARCH FARM

Located in Albion, Maine

- 200 acres managed
- 25 miles of beds in production
- Emphasis on soil health:
 - Wide production spacing to facilitate crop rotations
 - 50+ % of acreage in cover cropping annually
 - Extensive organic mulch inputs

TRIALING & SELECTION

- Approx. 3,000 varieties trialed in 2022, resulting in over 100 products added
- Year-round effort to select superior new products and substitutions
- Includes regional trials across the country with growers, universities, field day events, & more

What IS One-Cut Lettuce?

Distinct Lettuce Category:

- High leaf count
- Uniformly-sized leaves
- Grown to full size
- Suitable for salad mix

Uniform leaf size + high leaf count = yield potential

Exclusive to Johnny's

Salanova®

The Ultimate Efficiency Lettuce

As compared to baby leaf, expect a higher quality salad mix with a lower production cost.

By transplanting and growing full-size heads, you can expect...

- **Improved cultivation efficiency.** Get a jump on weeds, use more aggressive tools, try plasticulture. Fewer weeds come harvest time means faster picking, washing, and packing.

How we select in our

One-Cut Variety Trials

Every year we run trials at our home research farm and with grower partners across all seasons to identify the best choices for our assortment. At the same time we seek out, evaluate, and act upon feedback from our customers. Reach out to our contact center to share your experiences!

We select for performance in the following areas:

- Extended harvest window without quality decline in leaf size, texture, flavor, and color, even through consecutive harvests.
- Upright, strong habit, for less exposure to soilborne disease and ease of harvesting.
- Consistency in leaf shape and size, from plant to plant as well as from center to outer leaves within a plant, for better uniformity of product and less sorting of oversized leaves during wash/pack.
- Attractive plants, both as whole heads and individual cut leaves.
- Strong disease tolerance, for higher pack-out and holding quality in the field and post harvest.

Lettuce Resistance Codes

HR = High Resistance IR = Intermediate Resistance

(DM) Downy Mildew*

(LMV) Lettuce Mosaic Virus

(NL) Lettuce Leaf Anhid.

Key Advantages to Growing Salanova® Lettuce • Vegetable Product Manager Brenna Chase covers the key characteristics and benefits of this novel class of lettuce from Johnny's.

Advantages of One-Cuts Compared to Baby Leaf

Increased yield potential

- Full stands
- High bulk
- Heavier leaves
- Potential for multiple cuts

Excellent quality

- Better shelf life and handling
- Greater loft
- Superior flavor and color

Adaptability

- Extended harvest window
- Efficient cultivation
- Multi-use

Stress Tolerance

- Bolting tolerance
- Superior performance in challenging conditions

Cutting Types (Bulk)

Butter

Influences on Breeding & Availability

Global Markets

- Producibility
- Seed Quality
- Flavor

U.S. Commodity Ag.

- Shipper/packers – uniformity, shelf life
- Bremia – need for continuous updates
- Single Harvest

Hydroponics

- Speed/Yield
- Tipburn Resistance
- Shelf Life
- Color

JSS Internal Lettuce Trials

- Keeping up with genetics (pre-commercial testing)
- 200-300 varieties annually (all types)
- Spring, Summer, Fall, Winter Tunnels
- Staggered successions – 6 to 8 trials/year
- Various plant spacings:
 - 6"x 9", 4 rows/bed, plasticulture
 - 8"x 15", 3 rows/bed, bare soil

Color Retention

Salanova® Red Incised

Salanova® Red Tango

Key Traits in One-Cut Lettuces

- Attractive
- Easy to Grow
- Flavorful
- Yield Potential

Salanova® Oaks and Butters

Key Traits in One-Cut Lettuces

- Color Intensity, Gloss, Penetration, & Retention
- Early Plant Vigor – “determinate”
- Regrowth Vigor – “indeterminate”
- Frame Size
- Upright Habit
- Bolting & Tip Burn Tolerances
- Downy & Powdery Tolerances
- Leaflet Uniformity
- Leaf Quality at each harvest → thickness, texture, flavor & loft

Salanova® Green Butter

Plant Spacing & Harvest Timing

- Which Transplanting & Cultivating Tools?
- What challenges?
- Single Cut or Multiple?
- Seasonality?
- Desired leaf size & habit?

Salanova® Red Sweet Crisp — 3", 6", 9" in-row

Harvest Method

Harvest Knives

Baby Leaf Harvester

Cut Above the Core: Flat Cut vs. Curved Cut

Green Sweet Crisp

Red Sweet Crisp

Green Batavia

Friskygo (curled grow point)

Ezpark (organic)

Why is Yield so Important?

- Stronger advancement decisions
- Relative comparisons at variety level
- Further understand behaviors over time

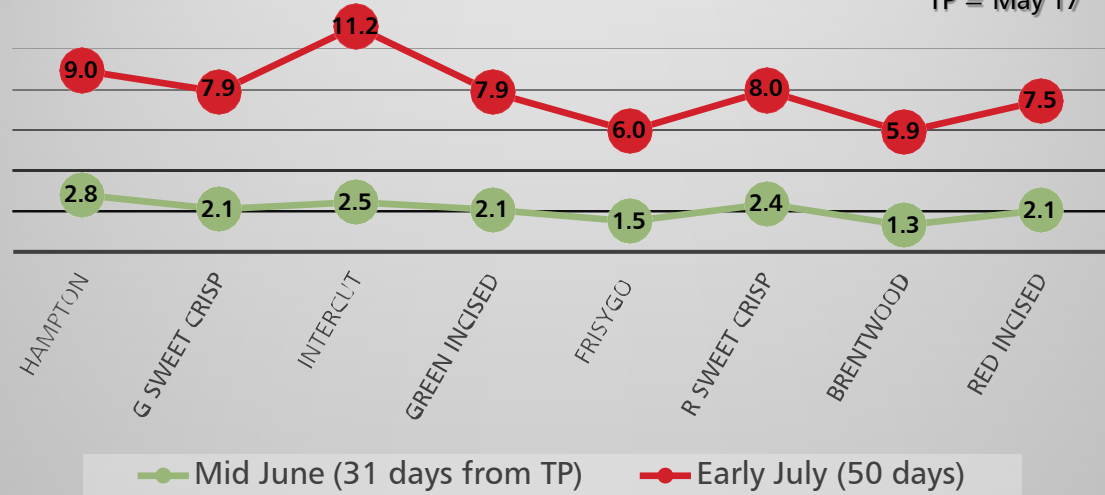

One-Cut Yield Trials at Johnny's

- Requires describing how it was done
- Current Yield Trial Setup:
 - Fertility pre-plant and in transplanter
 - 6" x 9" on plasticulture w/ drip
 - Leaf Height at each harvest
 - 12 avg heads/harvest – cut full block
 - Harvest same day instead of "when ready" for regrowth
 - 1" above core regardless of leaf size, same person
 - 2 harvests, 3 when possible, max single harvest
 - No wash, right time of day, work briskly
 - Replicated but not statistical

Spring One-Cut Yield Harvest

oz/head - avg 12 plts

Sow = April 18
TP = May 17

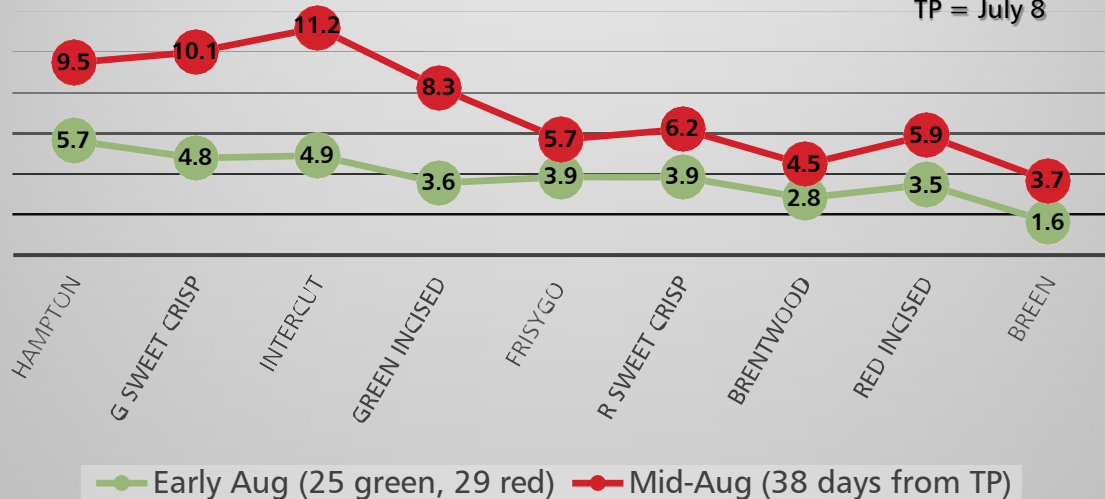

- Green > Red (top = GSC, Intercut)
- Sweet Crisp > Incised
- Seasonal Growth Rates
- Determinate vs Indeterminate
- Mini Romaines (Breen)

Summer One-Cut Yield Harvest

oz/head - avg 12 plts

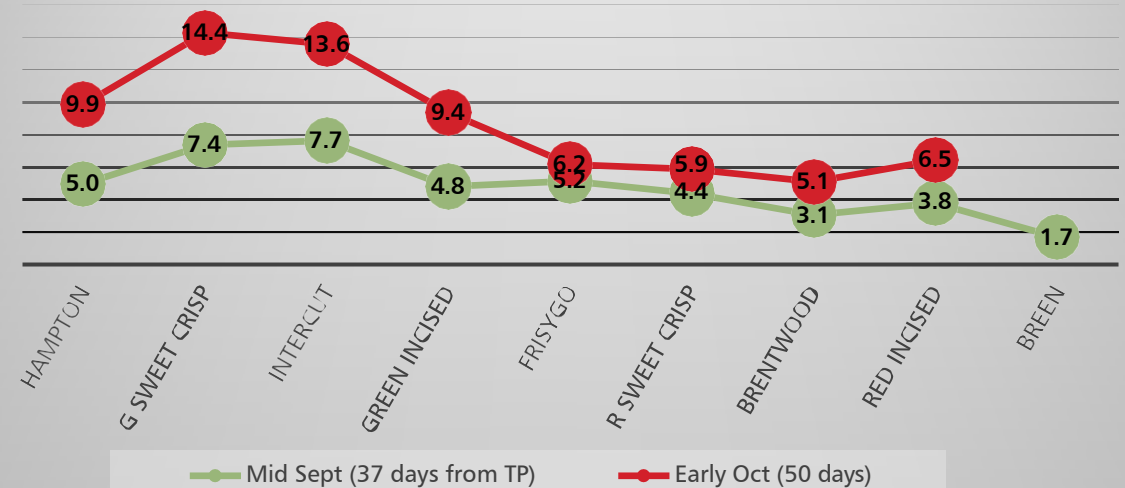

Sow = June 12
TP = July 8

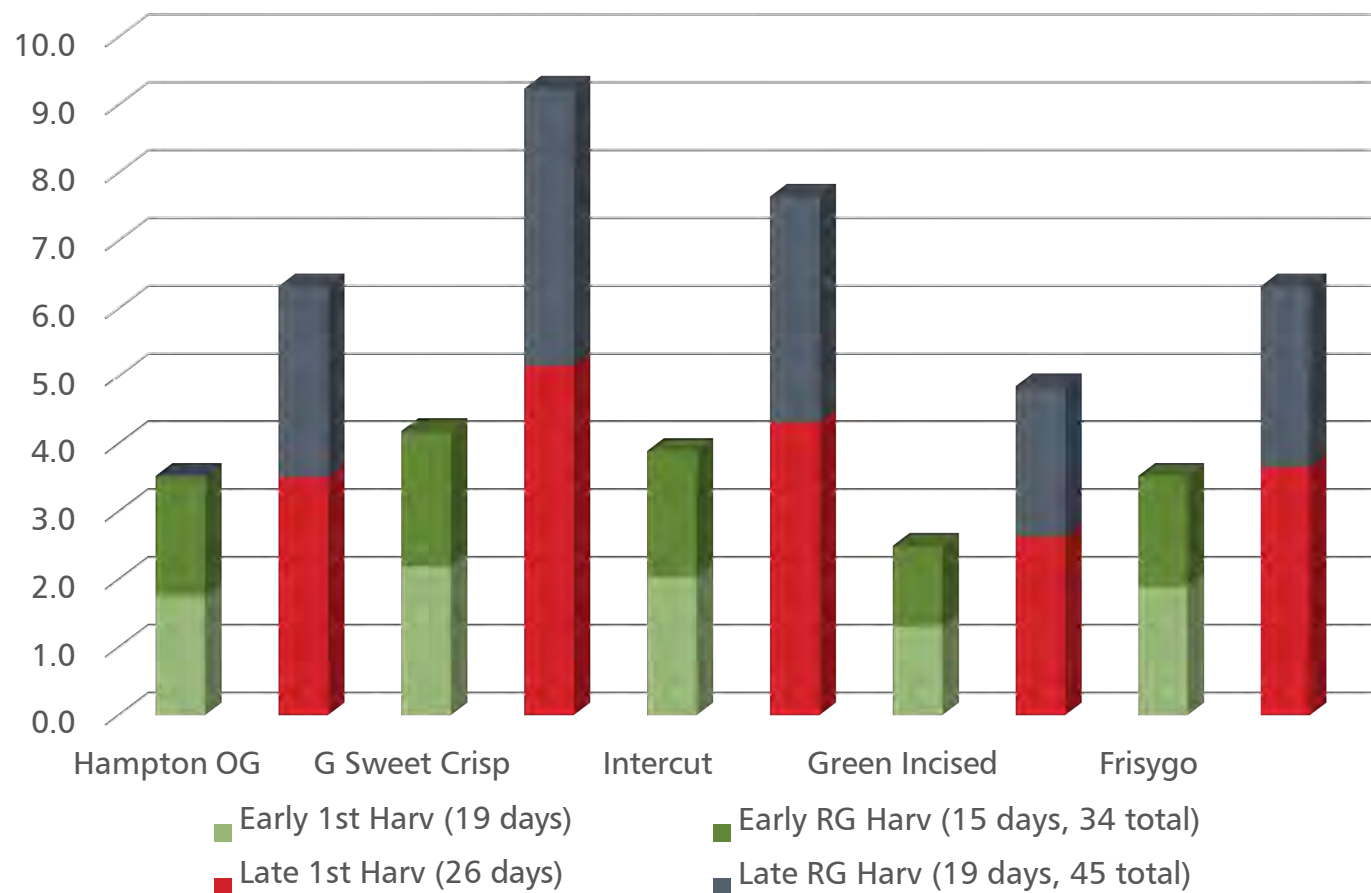

Fall One-Cut Yield Harvest

oz/head - avg 12 plts

Sow = July 23
TP = Aug 14

Summer 2020 Regrowth Harvest (oz/head) Green Cutting Types

Green Sweet Crisp

Green Incised

One-Cut One-Offs

- Complementary Traits
- Growing Efficiency
 - Same Transplanter
 - Jump on Weeds
 - Plasticulture/Mulches
 - No-till
- Marketing Flexibility
- Unique Mix
- Save Seed

Red Tatsoi

Spinach

'Red Snapper' Red Spinach

Mâche

Red Mizuna

Claytonia & Wild Arugula

'Charbell' Swiss Chard

'Red Veined Sorrel'

'Sempre Bianca' Endive

'Benefine' Endive

'Curlesi' Endive

One-Cut One-Offs Comparison Table

*Observed growth speed compared to One-Cut Lettuces 1st harvest

Crop	Variety Example	Growth Speed*	Color	Cut or Pick	Multi-plug?	Key Benefits
Friseé Endive	‘Benefine’	V. Slow	Green/Gold	Cut	Single	Color, Shape, Flavor, Loft, Storage
Curly Endive	‘Sempre Bianca’	Similar	Light Green	Cut	Both	Color, Shape, Vigor, Cold, Storage
Tatsoi	‘Red Cloud’	Fast	Purple	Both	Multi	Flavor, Speed, Color, Shape, Loft
Spinach	‘Sunangel’	Slow	Dark Green	Pick	Both	Flavor, Dark Color, Shape, Cold
Red Veined Sorrel	‘Red Veined Sorrel’	V. Slow	Red/Green	Both	Multi	Tangy Flavor, Appearance
Swiss Chard	‘Charbell’	Slow	Red/Green	Pick	Multi	Flavor, Color, Loft, Cold Tol.

More to Try:

- Claytonia (miner’s lettuce)
- Red Russian Kale
- Mizuna & Mibuna
- Arugula & Wild Arugula
- Amara & Mustards
- Escarole
- Red Leaf Amaranth
- Mâche

The background of the slide is a photograph of a hydroponic lettuce growing system. It shows several black plastic crates filled with various types of lettuce, including green leaf lettuce and some darker, more curly varieties. The system is set up outdoors on a wooden deck, with a yellow garden hose and a blue nozzle visible on the right side. The text is overlaid on a semi-transparent white rectangular area in the center.
