STRIP LIGHTS

OWNER'S GUIDE

Full Spectrum Horticultural Lighting
Ideal for propagation and growth.

SUNBLASTER
HORTICULTURAL LIGHTING

INSIDE THE BOX

We have included all the pieces you will need to get you up and growing quickly.

Your kit includes:

1. LED Strip Light
2. 6' Power cord with rocker on/off switch
3. Link cord 14"
4. 2 flush mount clips
5. 2 hanging clips

Operating your LED Strip Light

- Ensure adequate airflow around your lighting at all times.
- Use 18 gauge AWG extension cords only.
- You can interconnect up to 8 LED Strip Lights if needed via the linking cords provided.
- Do not expose to water, drip or spray lines.
- Do not connect more than 8 units together into one outlet.
- Do not force connections, they go one way only, make sure they are in correctly.
- Do not look directly into lights while running.

Maintaining your LED

SunBlaster LED Strip Lights are virtually maintenance free. You may wish to clear the lens cover of any accumulated dust or perhaps other debris. Unplug your lighting and use a clean dry or slightly damp micro cloth to clean your fixture and the protective lens.

GET STARTED

Choose how you want to support your lighting:

We have included two types out mounting or suspension clips in your kit. They snap on to the top of the lighting fixture.

LED Strip Light is included, it is a self contained unit with no user serviceable parts.

6" Power cord with on/off switch is included with your LED, use this to connect your LED to your power outlet or timer if you are wanting to set the timing of your lights to match different growing cycles. **Typical times on are 12/16/18 hours.**

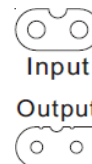

Flush Mount Clips are included to affix your LED to a variety of locations where you might choose to mount your lighting. Under cabinet is a typical location. You can mount your lighting anywhere you want with these handy clips.

Hanging Clips are also included, these clips are very popular for growers who want to suspend their lighting above their growing medium. With the addition of "S" hooks, they can easily be suspended in a variety of applications such as the very popular bakers racks for propagation and growing of micro greens or cloning.

14" Link Cord is included, you can interconnect up to 8 lighting fixtures, daisy chaining, and run them from a single power cord. This can be really handy in many growing applications. If you find you need extra length we do have a 24" Link cord available that is sold separately.

Power & Linking Connectors

Ensure you insert the correct end of the power cord or linking cord into the LED, they only go one way.

OPERATING TIPS

If you are using hanging clips, clip one hanging clip to both ends of the LED Strip Light and suspend the light in the desired position.

If you are using flush mounting clips, screw the mounting clips to the mounting surface and clip the LED Strip Light into the mounting clips. Be sure to choose an appropriate length screw.

Connect the power cord to the male end of the LED Strip Light.

Make sure the cords are *firmly* pushed into place and do not feel loose. Use the switch on the cord to turn the lights ON or OFF, or utilize a timer.

Link It cords can be used to connect up to 8 lights to a single power cord. Connect the female end of the LED Strip Light to the male end of the next light, and so on.
