The Salanova Cutter is designed specifically for one-cut lettuce. Use it to process full heads of the Cored-type Salanova into salad mix — the cutter isn't necessary for the Incised types.

Full ring – releases all leaves from the core.

Place a washed head upside down on either a clean working surface or in the palm of your hand. With your other hand firmly grip the cutter tool and place the full ring directly around the core of the head.

Gently press the cutter tool down and twist to slice around the core — individual leaves will fall freely from the core.

Half ring – releases half of the leaves from the core.

Place the half ring so that it circles half way around the core.

Press down without rotating to free half of the leaves from the core.
