High Performance: 28–40 days

Developed specifically for baby-leaf production. Vigorous, uniform seedling growth and thicker leaf textures help increase yield within a short growing period. Consistent leaf size even at variable plant densities. Loftiness prevents leaves sticking together post-harvest, and thinner petioles reduce cut surface area. If grown as full-size lettuce, loose, lightweight heads will result.

Lettuce Resistance Codes

HR = High Resistance IR = Intermediate Resistance

DM Downy Mildew[†]

LMV Lettuce Mosaic Virus

Nr Lettuce Leaf Aphid

Pb Lettuce Root Aphid

Rs Corky Root

TBSV Tomato Bushy Stunt Virus (Lettuce Dieback Complex)

[†] Numbers indicate known resistance to lettuce downy mildew isolates from either Europe (EU), United States (US), or both. As new races of downy mildew are identified, older races become obsolete. To be concise, Johnny's no longer includes obsolete races in the product listing.

Heritage: 28–40 days

Flavorful, reliable, and widely adapted. Faster growing than our high-performance varieties (see above) with thinner, more delicate leaves. These varieties offer minimal disease resistance and lack field-holding capacity. Dual-purpose varieties will mature into nice, full-size heads.
